The secret of life lies in properly maintained cells - cells that are properly fed and flushed of wastes and toxins.

If nutrients and water cannot penetrate cell walls because surface tension is too high, cells become poisoned by their own waste and will dehydrate and die.

The lower the surface tensions of water, the easier nutrients penetrate cells and the easier wastes are eliminated from cell walls, so purification can be maintained.

Our marine algae suspension, via its natural surfactant properties, decreases surface tension in water and increases the absorption capacity of drinking water and, in turn, the nutrients provided to cells via water.

Water is the basis of all life on earth. Everything on this planet arose out of the existence of water.

Man is composed of fifty trillion cells, all supplied with water.

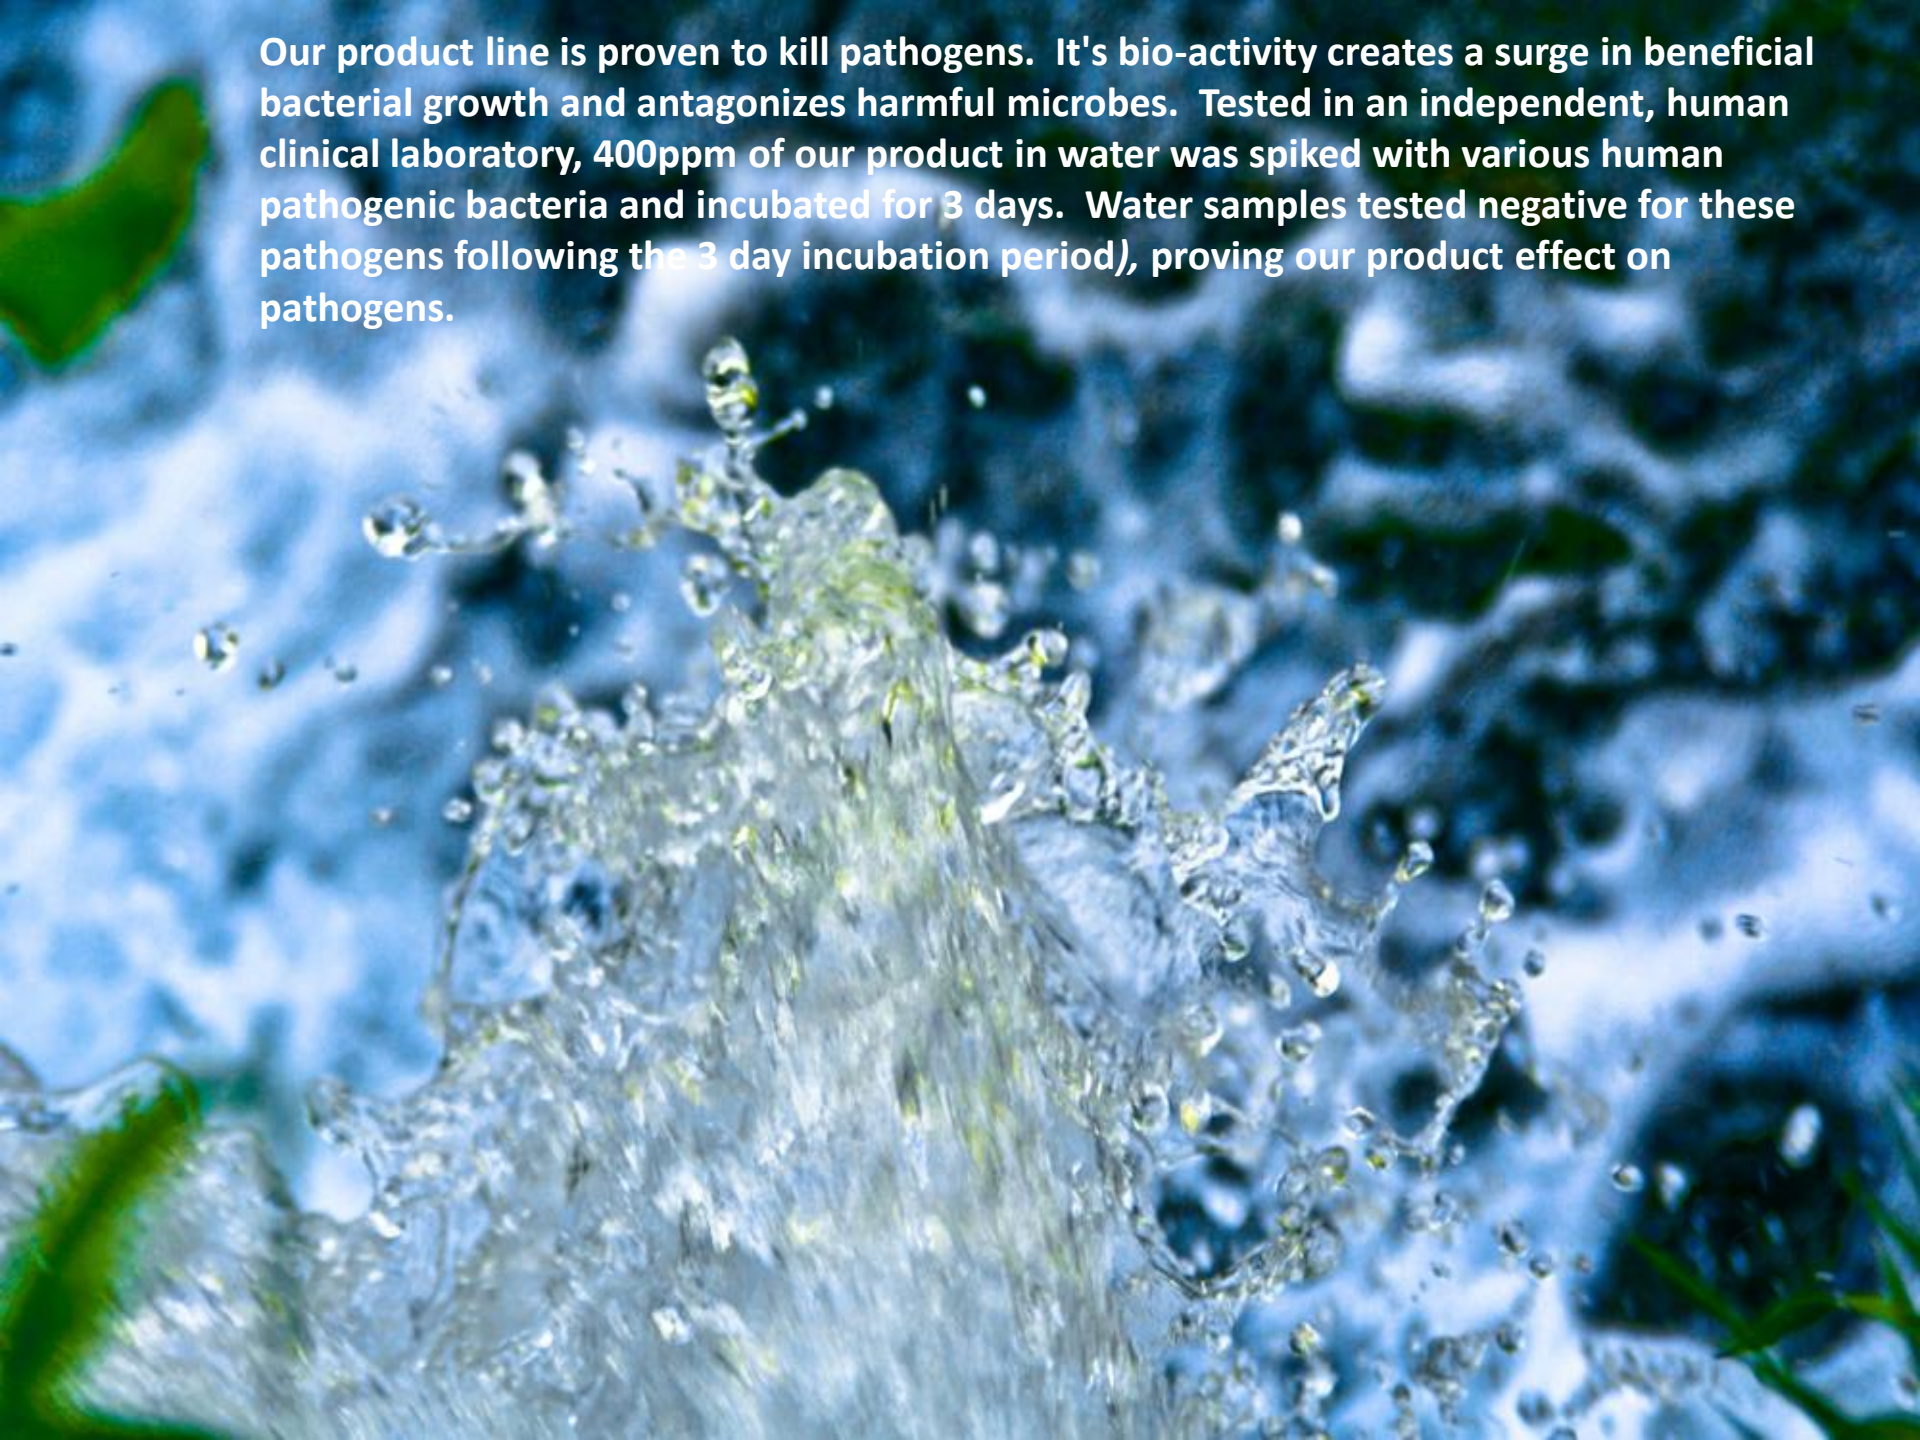

Recommended daily intake of water is

- Adolescents and adults - 1.3 liters plus other foods that contain water.
- 65 years and older - 1.5 liters.
- Children under 15 years old – 0.8 to 1.30 liters
- Infants - 400 to 600 ml.
- Pregnant women and nursing mothers - 1.5 to 1.7 liters

Over time, the natural human sensitivity to thirst has weakened, and there is a greater need to pay attention to water intake for health maintenance. Dehydration slows the metabolism of the body, and a lack of water leads to numerous ailments. Additionally, lack of water damages brain function. Water retention is related to toxins in the body fluids, and these toxins can be largely eliminated by increasing water intake.

Our product line is proven to kill pathogens. It's bio-activity creates a surge in beneficial bacterial growth and antagonizes harmful microbes. Tested in an independent, human clinical laboratory, 400ppm of our product in water was spiked with various human pathogenic bacteria and incubated for 3 days. Water samples tested negative for these pathogens following the 3 day incubation period), proving our product effect on pathogens.

Our marine algae concentrate produces superior water quality and provides the following benefits:

- Alkalizes the body from the inside out...
- Improves metabolism
- Helps regulate liver function
- Detoxifies the body (toxic substances in food and heavy metals)
- Improves kidney/renal function
- Helps with chronic constipation
- Eliminates problems with acid stomach and heartburn
- Improves physical and mental performance in athletes, students, and under stress
- Optimizes cellular activity, which improves the breakdown of fats and other energy components in the body.

Fill a glass carafe with a lid with 1.5 litres of water and finish this amount daily. Learn to drink 2 deciliters of lukewarm water upon waking. Drinking cold water or cold liquids is not advised – either on an empty stomach or with food. Cold liquids solidify fat in the stomach which can slow down digestion – causing many undesirable problems. It is much better to take warm liquids with or following meals.

A clean cell is a healthy cell

Healthy cells build healthy bodies

Healthy bodies maintain healthy bodies

Pre-biotic Water
