Our product provides a simple 100% GREEN solution for reservoirs, pond, lakes, wetlands, and marshes:

- **Bio-activates** - optimizes microbial health in standing water
- **Feeds** - bio-available nutrients for fish, phytoplankton and beneficial fauna and flora
- **Controls** - heavy metals & green algae 'bloom';
- **Oxygenates** water;
- **Balances** inter-dependent species for maximum vitality and long-term stability;
- **Restores symbiosis** - the systemic health of water eco-systems;
- **Reverses [eutrophication](#)**.

What It Is:

Our product is pure *Ascophyllum nodosum* marine algae - no additives.

- Nutritionally rich - chelated, colloidal, and optimally balanced = BIO-AVAILABLE:
 - Rich in oligosaccharides, nutrients & trace elements.
- Full of naturally-occurring complex enzymes and pro-biotic compounds = BIO-ACTIVE.

How It Works:

Our product is mixed with water and sprayed over the water surface. A single treatment restores the delicate balance between inter-dependent beneficial microbes, planktonic algae, and larger water plants and animals.

The treatment:

- Provides complex nutrients for plankton growth and fish life;
- Creates micro-coagulation of impurities and enhances anaerobic digestion at the pond/lake/marsh bottom;
- Blocks heavy metals in the water – controlling green algae by depriving it of its feed source;
- Increases available oxygen in the water;
- Eliminates odor and slime;
- Renders all water eco-systems healthy and vital.

Our product treatments are repeated when necessary – according to the influx of newly-introduced water to the eco-system. In the case of no new water introduction or aeration, a maintenance treatment is recommended in 6 months to 1 year.

Dosage: 40 ml of our additive per cubic meter of water.

Spray in a 1-to-100 dilution over water surface.

If water is eutrophic, repeat treatment in 1-6 months.

Our full product line is certified ORGANIC under the European Community regulations, which governs organic production, labeling and control of animal and human feedstuffs. All of our products can be sold and used in the eco-systems of agriculture in all member states of the European Community without special permission.
